# Solar Module

Product Catalogue

# Hangzhou Sunny Energy Science and Technology Co.,Ltd

Hangzhou Sunny Energy Science and Technology Co.,Ltd (known as brand "Suntellite"), honored as the technical innovation enterprise, was established in year 2001, and is dedicated in R&D, manufacturing, sales and after-sales of PV products. The headquarter of Suntellite is located in National Science Technology Park of Zhejiang University.

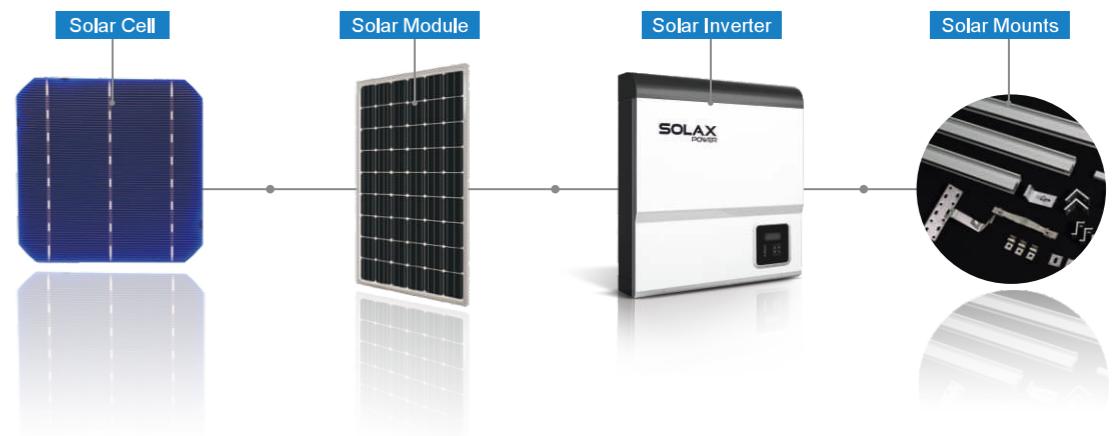

With main business of PV power plant integration, Suntellite professionally manufactures most of the key products in the PV system including solar cells, PV module, on-grid inverter, LED lighting, etc.

Meanwhile, Suntellite also participates in consultation, design, construction, operation and maintenance of many national solar module.

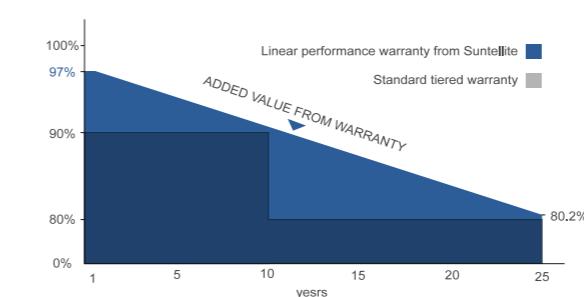

## ONE-STOP SOLUTION FOR PV PRODUCTS

Suntellite manufactures solar cell, solar module, solar inverter and solar mounts and offers engineering design service, and one-stop solutions for customers.

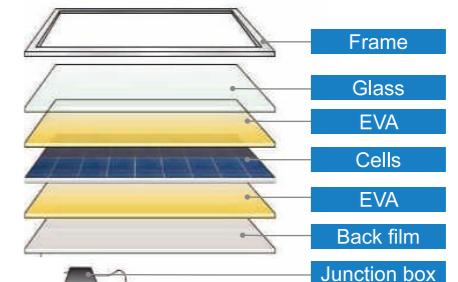

## WARRANTY

- No less than 97% output power in the first year.
- No more than 0.7% annual declination since the second year.
- 25-year warranty at 80.2% power output.
- Product liability and E&O insurance has been covered by Chubb Insurance.
- Enhanced design for easy installation and long-term reliability.

## SUNTELLITE PV MODULE PRODUCTION PROCESS

- Underwriter Laboratories Inc
- Conformite Europeenne
- TÜV
- PID Free

- MCS Certified
- BRE Global Listed
- PV CYCLE

## QUALITY CONTROL PROCESS

### LAMINATION

In lamination step, the following layers are stuck together through the vacuum:

Back Sheet – EVA – Solar Cell – EVA – Glass, namely through the cross-linking which takes place at process temperature of approx. 145 °C and usually lasts 16 minutes. In this step, long-chain polymers are cross-linked by adding additives. What is important here is the degree of the achieved cross-linking. Each batch supplied to production is checked chemically by us when it reaches the laboratory, to see whether the achieved degree of cross-linking is at least 80%.

Suntellite controls the parameters of the lamination process for each lamination run according to the manufacturer's data for EVA (abbreviation for ethylene vinyl acetate; a transparent plastic layer), since the parameters differ from manufacturer to manufacturer. What is decisive for us is a test, which checks the cross-linking of eva. EVA protects the solar cells against corrosive influences from outside. The solar cell is so to speak "encapsulated" and thus protected against water ingress.

### SOLAR MODULE FRAMING AND CLEANING

By the step the aluminum frame is installed to the laminated module to increase the intensity of the module components and it's further sealing of the cells in order to extend the module lifespan.

Silicon gel is filled between the frame and glass. No gap for air coming into the module.

## SOLAR MODULE EL INFRARED TEST

Electrostrictive the detection method of the light emitting (Electroluminescence, EL), using an electroluminescent light-emitting principle for crystalline silicon solar cells and components of the near-infrared imaging test is promptly detected by the EL test chart solar cells and components may exist defects, is an effective detection of the cell, the method of assembly. The EL test play an increasingly important role in solar module quality analysis and control.

## SOLAR MODULE FLASH TEST

The purpose of the test is to calibrate the output power of the module, and test its output characteristics to determine the quality and grade of the product. The measuring is carried out strictly according to STC (Standard test conditions)

## RESEARCH

With the continuous development of the application of solar cells, solar modules dedicated material innovation worldwide photovoltaic industry is in a steady increase in the period, because of solar energy as a renewable energy source, demand continued to grow.

Suntellite has continued to invest in the research and development of solar module, and contribute to create better performance solar module.

More than ever, the most effective solar module has arrived. Yes, through the hard work of our engineers, Suntellite continuously improve the performance of our products, to find the most efficient silicon solar cells and modules to pass.

Our goal is that in the limited time range, with a minimum of cost, to provide the best value to our customers first-class products and services.

# MONOCRYSTALLINE SOLAR MODULE

ZDNY195C-205C

## Typical electrical characteristics

Characteristics	ZDNY-195C	ZDNY-200C	ZDNY-205C
Max.Power(Pmax)	195Wp	200Wp	205Wp
Optimum Operating Voltage(Vm)	36.94V	36.95V	36.97V
Optimum Operating Current(Im)	5.28A	5.42A	5.55A
Open-circuit Voltage(Voc)	44.88V	44.95V	45.03V
Short-circuit Current(Isc)	5.50A	5.65A	5.73A
Cell Efficiency	17.50%	17.90%	18.40%
Module Efficiency	15.27%	15.67%	16.06%

Note: the specifications are obtained under the Standard Test Condition(STC):1000 W/m<sup>2</sup> solar irradiance, AM1.5, Cell Temperature 25 °C .

\*All black series as optional

<b>Solar Cell</b>	Mono-crystalline 125*125mm
<b>Output Tolerance(Pmax)</b>	0 ~ +3%
<b>Number of cells</b>	72 cells in series
<b>Module Dimension</b>	1580*808*35mm
<b>Weight</b>	15kg
<b>Max.System Voltage</b>	1000V(TUV)/600V(UL)
<b>Max.Series Fuse Rating</b>	16A
<b>Output Cable</b>	PV 4mm <sup>2</sup>
<b>Cable Length</b>	90cm±5
<b>Number of bypass diodes</b>	3
<b>Temperature cycling range</b>	(-40 ~ 85°C )
<b>NOCT</b>	47°C ±2°C
<b>Temperature coefficients of Isc</b>	+ (0.053±0.01)%/K
<b>Temperature coefficients of Voc</b>	- (0.35±0.001)%/K
<b>Temperature coefficients of Pmax</b>	- (0.40±0.05)%/K
<b>Load Capacity</b>	424pcs/20'GP 896pcs/40'HQ
